

Variable Air Volume Control

VAV 3000 Grand-R

At Gerhman we are driven by a strong desire to continuously generate improvements. We do that by developing products and systems that are easy to use and energy efficient, together with industry-leading knowledge, support, logistics and efficient availability.

gerhman.com

Variable air volume control

VAV 3000 Grand-R

Round VAV box (Variable Air Volume) in galvanised sheet steel, equipped with electronic Belimo or Siemens controller and a built-in aluminium pressure differential sensor.

- For low, medium and high pressure installations.
- Suitable for both supply and extract systems.

Design:

Housing of galvanized sheet steel. Single or double walled lined design as desired. Round connection according to Din 24145 and Eurovent diameters.

The units can be mounted in any position but it must be in accordance with the control manufacturers recommendations.

- Volume range: 0,031 m³/s - 1.508 m³/s (nominal) 111 m³/h - 5429 m³/h.
- Mounting of electronic or pneumatic (by others) control equipment is possible.
- Inlet pressure dependent or independent.
- Low pressure drop.
- Mechanically stable housing.
- Control valve can be fully closed (blade option O).
- It is possible to build in a diagonal integrated air volume measurement instrument.
- High control accuracy.

Generated sound data

The sound power is given in dB at a reference value of 10-12 watt.

The sound pressure levels L_p , dB(A) stated have taken into account the following:

For discharge sound, the attenuation of a silencer and a ceiling diffuser with plenum box.

For radiated sound the attenuation of the ceiling plenum and associated false ceiling. These values are shown in the correction table.

The adopted room attenuation is 10dB. If the actual value is lower, the dB(A) values have to be corrected.

Correction table:

	octavebands					
	125	250	500	1k	2k	4k
discharge sound	5	10	20	30	30	25
radiated sound	2	5	10	15	15	15

The radiated sound of the double walled design is about 5 dB less than the above table values.

Note: the L_w values have been measured with one end nozzle of the duct in the free room. (i.e. including end reflection). For rooms with a low sound level (<25dB(A)), hard surfaces, light walls etc. consult an acoustic consultant.

Remark

The stated dimensions are in mm.

Secondary attenuators if required are available upon request.

The technical specifications are only valid if the supply to the units is even.

To ensure accurate flow cross measurement it is recommended that the minimum inlet velocity is 1.5 m/s, the inlet ductwork matches the inlet spigot diameter (D) and is 3 x D mm straight in length.

Silencer

For reduction of internal flow noise. Sound attenuator length 500-750-1000-1500 mm.
For performance details check model R01 silencer catalogue.

Reheat Coil

- Separately deliverable for reheat of air volume
- Casing made of galvanised sheet steel
- Flanged on both ends
- Copper tubes and aluminium fins
- Generally two rows
- Maximum operating pressure 16 bar
- For warm water up to 100 °C
- Water connections horizontal, air venting by customer
