Linear Grilles

Linea

LINEA Linear grilles are mostly preferred products that are used in heating, cooling and ventilation systems because of their aesthetic appearance. They can be used as supply or exhaust grilles on air ducts in large spaces for heating and cooling. Besides, they are the mostly preferred products on and next to fan coils and radiators. The distance between the blades and the thickness of the profile that is used on blades provides a durable structure and the aesthetic appearance ensures ideal ventilation equipment. For the spaces when linear appearance is required, many grilles can be combined and long grilles can be formed as needed.

Properties

- They are used as supply and exhaust grilles on air ducts. *They can be manufactured with large and narrow cases. *Can be manufactured with or without frames.
- Extruded aluminum profile is used.
- Blades are produced as 0° or 15° angle according to product type.
- They can be manufactured as anodized or with electrostatic powder coating (colors from RAL catalogue can be chosen).
- To adjust the blowing air damper can be added. Also, dampers can be manufactured with parallel or opposite blades.

H	75	75	150	150	250	150	250	300	500

Installation

Screw system is the standard mounting type, however according to the application place, there are different mounting types as; Clip system and Plate spring system.

Screw Mounting

It is the standard mounting type and with the holes on the frame for Ø4mm they can be installed. They can be used without screws on radiators.

Plate Spring System

They are good solutions for deep surfaces. This type of mounting is done by steel plates on the side surfaces of the grilles case. They can be used with or without case.

Installation with Clip System

They can be applied with blind case. Blind case is mounted to mounting holes. For mounting, clip mounted on the grille and by the help of screwdriver clip installed to the blind casing

Plaster-in Linear Grilles

Linea (+PG)

Looking for a cleaner, more streamlined grille construction in your project?

Linea+PG grilles might be the ideal solution for you. The flush finish provided by this implementation leaves your walls looking pristine, while still allowing for incredible airflow and efficiency. It transforms your linear bar grilles from a standard, low-budget look into a timeless (and seamless) integration with the rest of the room.

Some of the great features that put our +PG grilles above the rest:

- Borderless installation, even on curved surfaces.
- Achieve a Level 5 plaster finish.
- Pre-punched holes for quick mounting. Add plaster and smooth it out!
- Aluminum, bronze or stainless steel options.

Plaster-in Linear Grilles

Linea (+PG)

New frame for linear bar grilles which is designed to be plastered in giving a seamless appearance once installed. New plaster-in frame uses or ordering additional code ‘+PG’. **Linea+PG** have been designed to satisfy air diffusion and engineering requirements while providing a narrow plaster-in border to meet architectural specifications. Plasterline grilles may be used in modular or continuous situations for sidewall, cill or bulkhead applications. The range is available with a wide variety of special options and fabrications to suit most project requirements. All applications can be achieved with the use of a standard fixed core version.

Description

- *New frame for linear bar grilles which is designed to be plastered in giving seamless appearance once installed.
- *The front border is designed to integrate seamlessly within plasterboard builders work opening, with a concealed screw fix installation.
- *Blades are produced as 0° or 15° angle according to product type.
- *They can be manufactured as anodized or with electrostatic powder coating (colors from RAL catalogue can be chosen).
- *To adjust the blowing air damper can be added. Also, dampers can be manufactured with parallel or opposite blades.

* No	Model	Application

Floor Linear Grilles

Linea S400 S415

FOR DATA AND SYSTEM ROOMS. They are used in places with acclimatization's from floor. This type of mounting is done by steel plates on the side surfaces of the grilles case. The damper that is used to adjust air flow can be controlled easily from the top. According to the order, dampers can be parallel with the long or the short corner. If requested, dust holding filter can be added.

S400 type linear grilles; they are also named as floor grilles. S415 type linear grilles; has the same properties with S400. The only difference is they have 15° blade angle.
